

## Quantum Positron-Acoustic Waves in Dense Plasmas

By M. G. Shah

LAP Lambert Academic Publishing Jan 2016, 2016. Taschenbuch. Book Condition: Neu. 220x150x7 mm. This item is printed on demand - Print on Demand Neuware - The book concerns the study of positron-acoustic waves (PAWs) in an unmagnetized, collisionless, dense plasma system consisting of cold positrons, degenerate electron and hot positron fluids and positively charged static ions. The well-known reductive perturbation method is employed to derive the Korteweg-de Vries (K-dV), modified K-dV (mK-dV) and Burgers equations. The basic properties of PAWs (viz. amplitude, width, and phase speed) are incomparably influenced by the effects of degenerate pressure, kinematic viscosity, planar and nonplanar geometries, and plasma particle number densities. For the non-relativistic limits in like manner for the ultra-relativistic limits, the nonlinear waves (viz. solitary and shock) are modified significantly. The relevance of the results in some astrophysical compact objects including non-rotating white dwarfs, neutron stars, etc. are extensively specified in this book. 112 pp. Englisch.

#### Reviews

These sorts of pdf is the greatest ebook offered. We have study and that i am sure that i will going to study once more once more in the future. Its been printed in an remarkably simple way and it is only after i finished reading through this pdf through which in fact transformed me, affect the way i believe.

Comprehensive manual! Its such a excellent read through. I have read and i also am confident that i am going to gonna study once more once again in the future. Your life period will be change when you total looking over this ebook.
