Screening for Cognitive Impairment in Older Adults: An Evidence Update for the U.S. Preventive Services Task Force: Evidence Synthesis Number 107

By U. S. Department of Health and Human Services

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand.

Paperback. 412 pages. Dimensions: 11.0in. x 8.5in. x 0.9in. Dementia is an acquired condition that is characterized by a decline in at least two cognitive domains (e. g. , loss of memory, attention, language, or visuospatial or executive functioning) that is severe enough to affect social or occupational functioning. Patients with dementia may also exhibit behavioral and psychological symptoms. The proposed Diagnostic and Statistical Manual, version 5 (DSM-V) subsumes dementia under a new syndrome, major neurocognitive disorder. Patients with major neurocognitive disorder experience a significant cognitive decline that is significant enough to interfere with independence in instrumental activities of daily living (IADLs), but this decline cannot be wholly due to delirium or another mental disorder, such as schizophrenia. Based on its etiology, dementia can be classified as degenerative, vascular, or other. The major dementia syndromes in older adults include: Alzheimers disease, vascular dementia, frontotemporal dementia, dementia with Lewy bodies, Parkinsons disease with dementia, and dementia of mixed etiology. In these dementia syndromes, abnormal deposits that accumulate in the brain are believed to contribute to deterioration of brain function and dementia. The exact etiological mechanisms for many types...

Reviews

Excellent electronic book and helpful one. Better then never, though i am quite late in start reading this one. You wont truly feel monotony at whenever you want of your time (that's what catalogues are for relating to when you question me).
